

A WORKING ANSWER TO MENTELLA HEALTH'S APPLICATION TASK

# Welcome Copilot

HR tracks hiring in a shared Google Sheet. When a row turns “Hired”, this system sends the welcome email, keeps proof of every send, and alerts a human the moment anything stops working. It is running live right now, and this document is a tour of it.

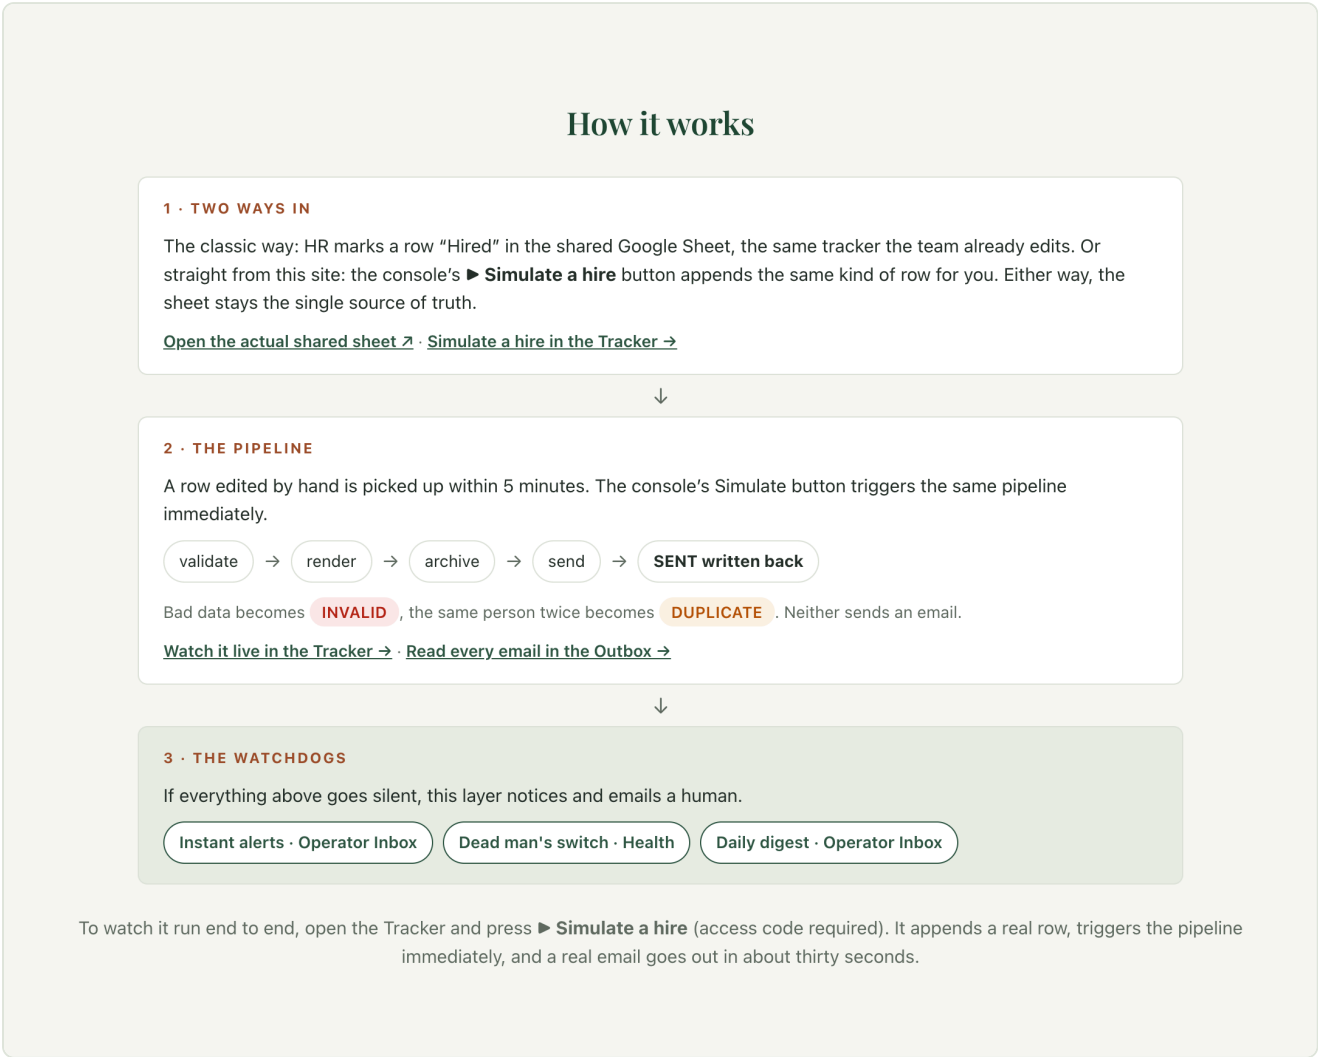

---

**Live demo:** <https://welcome-copilot.vercel.app>

**Source:** <https://github.com/averatec0773/welcome-copilot>

An unofficial demo. All people and policies are fictional, and every recipient address is a + alias of the author's own inbox. Every screenshot here is taken from the live system, unedited except for cropping.

# How it works

The landing page, live. Two ways in (edit the sheet, or press Simulate), one pipeline, and a watchdog layer underneath. Every chip links to the console page where that stage is visible.

## Things that go wrong, on purpose

- A typo’d address → **INVALID**, no email leaves.
- The same person twice → **DUPLICATE**, only the first row may send.
- A re-sorted sheet mid-run → writes are keyed by hire ID, so results land on the right person.
- A crash mid-send → a SENDING marker waits for a human. Never auto-retried into a double send.

Two of these are permanently staged in the live sheet, so the guards are always on display.

## How you’d hear about it

| Alarm                | Catches                                    |
|----------------------|--------------------------------------------|
| Instant alert emails | Errors the pipeline can see                |
| Dead-man’s switch    | Silence itself: dead trigger, revoked auth |
| Daily digest         | The slow drift a human should read about   |

The digest signs off with: “No news from me tomorrow would itself be a signal.”

Every email, archived the moment it was rendered

- What you read here is exactly what the recipient got.
- LIVE means it was actually sent. DRAFT means a dry-run rehearsal that never left.
- The archive is written before the send, so even a failed send leaves evidence.
- The run log on the Health page records whether each archived email actually left.

Welcome to Mentella Health, Maya!

We are thrilled to have you joining our clinical team in WA. Your first day is **Saturday, September 12, 2026.**

A few things to know before you start:

- Your manager:** Luis Herrera will reach out this week to schedule your first check-in.
- Credentialing:** we have your LMFT on file and will confirm state paperwork before day one.
- Questions?** Our [New Therapist Assistant](#) answers the questions new hires ask most: scheduling, EHR access, payroll, PTO, and more.

The Outbox: every email archived at the moment it was rendered, before the send, so even a failed send leaves evidence. What you read here is exactly what the recipient got.

# An assistant that shows its homework

When is my first paycheck, and how do I set up direct deposit?

Your first paycheck arrives on the first scheduled payday after your start date [2].  
Mentella pays semi-monthly on the 15th and the last business day of each month [2].

To receive it, set up direct deposit in your Paylocity profile during your first week; it's a day-1 checklist item [1][3]. You can add up to 3 accounts and split pay by percentage or fixed amount [1]. Once you complete your direct deposit setup in Paylocity, your first paycheck will be paid out by direct deposit [2]. If you start mid-period, that first check is prorated to the days you actually worked [2].

- IT and Account Support
- Payroll and Paylocity cited in the last answer**
- PTO and Leave
- Scheduling with Calendly
- Supervision and Licensure
- Your First Week at Mentella cited in the last answer**

Every answer carries numbered citations, and the docs it drew from light up in the handbook rail: “cited in the last answer”.

**Payroll and Paylocity**  
HR · updated 2026-08-01 · fictional handbook content

Mentella runs payroll through Paylocity. This page covers the pay schedule, direct deposit, reading your stub, and getting reimbursed.

**Pay schedule (semi-monthly)**  
Mentella pays semi-monthly: on the 15th and on the last business day of each month, covering the two halves of that month. If the 15th falls on a weekend or holiday, pay moves to the prior business day. Salaried clinicians see the same gross amount each pay period; hourly and per-session staff are paid based on hours or sessions logged and approved in the prior period. Your first paycheck arrives on the first scheduled payday after your start date, paid out by direct deposit once you set up direct deposit in Paylocity — if you start mid-period, that first paycheck is prorated to the days actually worked.

**Setting up direct deposit**  
Set up direct deposit in your Paylocity profile during your first week — it's one of three items on the day-1 checklist alongside tax forms and your emergency contact. You can add up to 3 accounts and split pay by percentage or fixed amount. Changes to direct deposit take one full pay cycle to take effect, so update it early if your bank is changing.

**Reading your pay stub**  
Your stub in Paylocity breaks gross pay into base salary or session pay, any stipends (CE stipend, on-call pay), and a separate line for reimbursements paid that cycle. Deductions are grouped into taxes, benefits, and any retirement contribution. If a number looks wrong, check the pay period dates at the top first — pay stub questions are usually a timing mismatch, not an error.

example Google account and set up 2-step verification (required within 48 hours). Complete your Paylocity profile:

Click any doc in the rail and read the source on the spot, so an answer can be checked, not just believed.

verification (required within 48 hours). Complete your Paylocity profile: direct deposit, tax forms, and emergency contact.

What is the guest wifi password at the office?

I'm not sure about the guest wifi password. The handbook excerpts I have cover VPN and security requirements, but don't include wifi passwords or network credentials.

Please reach out to ops@mentella.example for that information, or check the IT Hub portal, which is Mentella's single portal for IT requests and general tickets [1].

► Sources (3)

Ask about onboarding, payroll, PTO, EHR access...

Ask

Asked for the office wifi password: not in the handbook, so it says so and points to a human. No guessing.

The four suggested questions are open to everyone (cached answers, zero cost). Free-form questions run live through Claude and need the access code. Limits are shown, never silent: 8 a minute per visitor, 300 a day for the whole demo.

# Press the button

Simulate appends a genuine row to the shared sheet, exactly like HR marking someone Hired, then triggers the pipeline immediately. The form says out loud what will happen: the typed name lands on the public sheet (so make one up), the email goes to an alias, and your own address never appears anywhere public. About thirty seconds later there is a **SENT** badge and the actual email, previewed in place.

## STEP 1 · FILL IN A NAME

×

### Simulate a hire

**Trigger the real pipeline yourself**

- This appends a genuine row to the shared sheet, exactly like HR marking someone Hired, then triggers the pipeline immediately. No waiting for the 5-minute sweep.
- The pipeline validates the row, renders the email, archives it, then sends it. The email is usually out within thirty seconds.
- Watch every stage below, or open the sheet and see your row land.

The first name you type is recorded on the public shared sheet, so make one up rather than using a real one. The welcome email itself goes to a + alias of the author's own inbox, never to a stranger. Want to read it in your own inbox too? Tick the box below: in every public record your address is replaced by an alias, but the copy arrives in your real inbox. No list, no follow-up.

First name (optional, make one up)

Maya

Applied **Jul 31, 2026** → Interviewed **Aug 16, 2026** → Offer **Aug 23, 2026** → Starts **Sep 13, 2026**

Hire ID: H-0025      License: LMFT      State: WA      Manager: Luis Herrera      Email: ayetek0773+demo-6d7322@gmail.com

Created by a demo visitor via Simulate

Welcome email: **SENT**

How a row becomes a sent email

Interviewing → Offer → **Hired** → the pipeline → validate → render → archive → send → **SENT**

Rows edited by hand in the sheet are picked up within 5 minutes; the Simulate button triggers the same run immediately. A row that fails validation is marked INVALID, and a second row with the same email is marked DUPLICATE. Two rows above are broken on purpose so you can watch both guards fire.

## IN A REAL GMAIL INBOX, DISCLAIMER INCLUDED

to:(ayetek0773+demo-6d7322@gmail.com)

Welcome to Mentella Health, Maya!

We are thrilled to have you joining our clinical team in WA. Your first day is **Saturday, September 12, 2026**.

A few things to know before you start:

- **Your manager:** Luis Herrera will reach out this week to schedule your first check-in.
- **Credentialing:** we have your LMFT on file and will confirm state paperwork before day one.
- **Questions?** Our [New Therapist Assistant](#) answers the questions new hires ask most: scheduling, EHR access, payroll, PTO, and more.

If anything here looks wrong, just reply to this email.

Warmly,  
Mentella People Ops  
people-ops@mentella.example

This is a demonstration email from Welcome Copilot, an unofficial job-application demo. It was not sent by Mentella Health, the people and policies in it are fictional, and no real onboarding is underway.

Forward

Delivered to the + alias (see the search bar), greeting the chosen name, with a footer that says exactly what this is: a demonstration, fictional people, no real onboarding. Demo rows are archived automatically after 7 days.

## The parts you can't screenshot

- **It never sends twice.** The sheet itself records every send, keyed by hire ID rather than row position. Re-sort it, edit it, crash mid-run: a row that sent once stays sent.
- **It fails closed.** Anything other than an explicit `dry_run = FALSE` means rehearsal mode: drafts, not sends.
- **Every limit is visible.** Simulations, assistant questions, mail quota: all shown with live remaining counts before anyone hits them.
- **The assistant only knows the handbook.** Growing it means writing docs the team controls, not training a model.
- **Everything in this document is live.** The sheet, the console, the emails, the badge: open the demo and press the same buttons.

### Try it yourself

Open <https://welcome-copilot.vercel.app> and click around; the console and the suggested questions are open to everyone. With the access code, press ► **Simulate a hire** and watch a real email go out in about thirty seconds.

### Where it would go next

Point the same pipeline at the real tracker behind a dry-run flag for a week, then extend the pattern to the other spreadsheet-shaped handoffs around onboarding. Where a system has no API (several core clinical and billing systems don't), treat the scheduled export as the interface and validate it loudly; a working slice of that ships in this repo too.

Built with Google Apps Script, Next.js, Claude, and a healthy fear of silent failures.

Unofficial demo for an application to Mentella Health. All data fictional.
